

GOD'S WORLD CALENDAR– WITH THE FACTS

Creation Calendar is the oldest calendar in the world. It dates back to the first week of Creation. It's Biblical, astronomical and scientific.

Thus, we are faced with the task of establishing the beginning of the calendar, for it is **an** instrument of **time**, by which events are recorded. In order to do so, we must go back to the oldest record known to man, which is Genesis of the Holy Bible, and it states, "**In the beginning** God created the heaven and the earth. And the earth was without form, and void, and darkness was upon the face of the deep. And the Spirit of God moved upon the face of the waters. And God said, Let there be light: and there was light. And God saw the light, that it was good: and God divided the light from the darkness. And God called the light Day, and the darkness he call Night. **And the evening and the morning were the first day.**" Genesis 1:1-5. Thus we have the beginning of **time** on this earth.

Moving on to Genesis 1:14-19, we quickly see that Creation Calendar was created beginning on the **fourth day** of the week of creation, Wednesday, making Sunday the first day of the week, and bound the time by astronomical law. It is with God's astronomical law that we prove **the authenticity** of Creation Calendar, showing it to be the **oldest** calendar in the world created by (YHWH), the Almighty God, Creator of heaven and earth. Our next great task is to show, in what **time** of the year (which season), did **time** begin and nature gives us the clue saying, in reality, it is when plants, shrubs and trees etc., begin to bud and bloom, which is pointed out by the **vernal equinox**. Vernal means **spring**, equinox means **equal day and equal night**, or March 16-17 of the Gregorian Calendar year. By these facts we are shown that March 16-17 is the first day of the first season, spring, the first day of the solar year. As there are four seasons in the year, with three months to the season, (twelve months) for a total year of 365 days. Counting forward 365 days beginning with March 16-17, we come to March 15-16 of the next year for the end of the year, instead of December 31. This shows that the year begins with March 16-17 and ends with March 15-16 of the next year instead of January 1 and ending December 31.

Consider that you don't see the trees budding, blooming or putting on leaves or fruit in January, neither do you see flowers, shrubs or the grass budding or turning green and blooming. Why? Because the vegetation instinctively knows that January is a winter month, in which life is dormant and nature obeys the laws created by our heavenly Father to regulate the activities of nature.

Since January, February and half of March are winter months, and an astronomical year begins with the first season, spring, it became necessary to move the winter months from the beginning of the year, to the end of the year.

The calendar will be a twelve month calendar beginning with March 16-17 and ending with March 15-16. Due to the splitting up of the month March, the actual count of calendar frames will be thirteen, allowing for an astronomical 12 month calendar.

All future calendars will follow the same format and thus will be in harmony with the calendar in the sky.
